EggTimer Automation

Setup

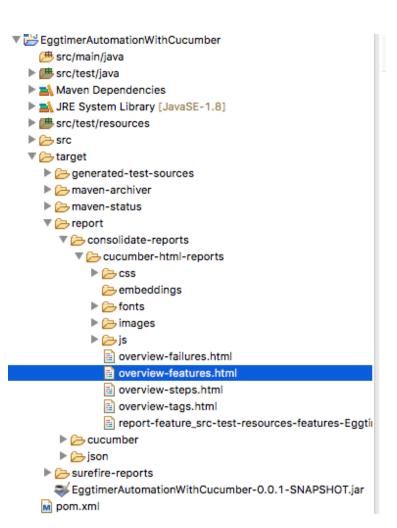

Import the maven project

How to Execute and Verifying Report

- Procedure-01
 - Select com.eggtimer.runners.EggtimerTestRunner -> right click -> Run As Junit Test
 - HTML Reports generated at ./target/report/cucumber
- Procedure-01
 - Select pom.xml -> right click -> Run As -> Run Configuration , And define as show below

Report

Project	Number	Date
Eggtimer-Consolidate- Report	1	16 May 2019, 19:07

Features Statistics

The following graphs show passing and failing statistics for features

		Steps				Scenarios			Features		
Feature	Passed	Failed	Skipped	Pending	Undefined	Total	Passed	Failed	Total	Duration	Status
test eggtimer functionality	5	0	0	0	0	5	1	0	1	28s 560ms	Passed
1	5	0	0	0	0	5	1	0	1	28s 560ms	
	100.00%	0.00%	0.00%	0.00%	0.00%		100.00%	0.00%			100.00%

To create the project from scratch (incase required)

- Create Maven Project
- Add Maven Dependencies
 - o selenium-java
 - o cucumber-java
 - o junit
 - o cucumber-junit
 - Webdrivermanager
- Add Maven Plugins

- o maven-compiler-plugin
- o maven-surefire-plugin
- o maven-cucumber-reporting
- Create Hybrid Automation Framework as defined in the code
 - o Create Constants Interface to keep the String constatns
 - Create Page Classes
 - com.eggtimer.constants.Constants
 - Create Step Definitions Classes
 - com.eggtimer.stepdefinitions.EggtimerStepDefinition
 - Create Runner Classes
 - com.eggtimer.runners.EggtimerTestRunner
 - Create Util Classes
 - com.eggtimer.utils.ReadProperties
 - com.eggtimer.utils.DriverFactory
